## *Hardy Phlox List*

HOSPITAL STATION,  
BINGHAMTON, N. Y.

MEMORANDUM

We take pleasure in presenting herewith our list of Phlox which I think is as complete as it can well be made.

Some varieties have been eliminated because they have been supplanted by better ones, and those better varieties have been added as only the best are good enough.

## SHIPPING CONDITIONS

I WILL SHIP ANYWHERE. PARCEL POST OR EXPRESS.  
Sender will pay cost of shipment.

If your mail will reach you in 24 hours, 10c per doz. should be added, longer distances accordingly.

I try to pack as light as consistent with safe shipping, using water-proof paper for packing.

Express charges can be collected on the receiving end.

Foreign Countries have to apply for shipping permits. Inquire at your Post Office for information; this does not apply to seeds.

I do not ship on credit.

Please mention how you want your plants shipped.

For reference as to my responsibility, Dun's or Bradstreet's, First National Bank, or Chenango Valley Savings Bank, Binghamton.

Remittance: Send money order, or in small amounts send stamps in 1½ or 2 cents, we carry no book account.

Acknowledgment of your order is sent out when received stating about when shipment will be made.

Notice also is sent out when order is shipped and if customers fail to receive their order in a reasonable time should notify me so that it can be traced.

Claims for damages should be made on receipt of goods.

I aim to send out the best plants obtainable, but in some instances varieties will not grow as large as others, hence, there always will be variation in size of plants, particularly the reds and crimsons are not as strong as the other sorts.

## DIRECTIONS AND INSTRUCTIONS

When plants are received from the nursery, unpack them at once. I would say regardless of what condition the roots are in, put them in a pail of water for an hour.

Planting: This should be done in the evening although this is not absolutely necessary for the best well-doing. Plant plants 14 inches in the row and two or three feet between the rows; plant them two or three inches deep, spread out the roots so they will do service and give the plant a good start; tramp the roots down hard with your feet, this will not be too much. After the ground starts to freeze, cover it over with a litter of horse manure, leaves or anything else of a similar material and the plants will come through all right and start to growing in the Spring and give abundant flowers during the following Summer.

Culture: If the Summer is dry, water should be supplied as on the lawn or garden in order to keep them growing. In the wet season, mildew is apt to make its appearance and should this occur, dust powdered sulphur on the leaves in the morning when they are wet; in doing this, the sulphur will stick. In order to detect mildew, a white mold will make its appearance on the top of the leaves and draw them together so that they cannot do their function.

When a lengthy, dry season sets in, red spiders are apt to make their appearance—they only appear in dry weather. Soap-suds sprayed on the underside of the leaves will curb them; clean water can be used but in that case the force of the water will have to knock them off. If soap-suds are used, it is well to spray with clear water a few hours after, to wash off the suds.

The red spider is a small spider not readily detected with the natural eye but can be detected by a rusty yellow appearing along the ribs and the deeper parts of the leaves, usually on the under side. Keep the soil stirred and plants growing and the above will not bother you.

Before planting Phlox the soil should be well enriched with manure as they usually remain in the ground for several years and are strong growers and feeders.

The planting of Phlox should be done from the latter end of September until a very hard frost stops all plant-life. But the order for Phlox should be given as early as possible. Fall is the proper time to transplant Phlox, but the work can be done early in Spring. The plants will be strong and all of such a size that they will give absolute satisfaction the first year as to growth and flowers.

My nursery is inspected every year, hence healthy stock is sent out.

Please send your order as soon as possible, in that way it can be shipped whenever the plants are ready.

This is perhaps the largest Phlox list in this country and I claim to have every thing that is good in Phlox.

Any plant not true to name will be replaced free of charge.

All correspondence will get careful attention.

I have taken down the time the plants are in bloom with us. this is not correct under all conditions. seasons vary, but it can be taken as an average.

The height of Phlox will not hold good under all conditions. they will grow taller when planted too close to other shrubbery.

In closing, I wish to thank my patrons and friends for their patience and cooperation and hope we may work with the same zeal in the future.

Assuring you always to work with the best efforts to do all in my power for your advancement, I am,

Sincerely yours,

W. F. SCHMEISKE.
